Thermal Remediation Services, Inc. Renamed TRS Group, Inc.

TRS Group Expands into International Markets And Thermally Enhanced Oil Recovery

Longview, WA — Thermal Remediation Services, Inc. (TRS) announced that it has changed its corporate name to TRS Group, Inc. (TRS Group). The name change recognizes corporate expansions to deliver its core technology, Electrical Resistance Heating (ERH), into both the global environmental market and the thermally enhanced oil recovery market.

For the last 10 years, TRS has been the market leader and premier provider of ERH in the US environmental market. TRS Group is taking this success globally to address the cleanup of thousands of contaminated sites in both developed and developing countries.

The oil sands of Alberta Canada contain bitumen reserves similar in size to the oil fields in Saudi Arabia. TRS Group is now poised to apply ERH for the heat enhanced recovery of bitumen from known reservoirs where current extraction techniques are not viable due to geology, cost, or environmental impact.

In recognition of these expansions in corporate reach, TRS Group has unveiled a new logo with the corporate tagline "Accelerating Value." According to its President, Mr. Michael Dodson, "the primary benefit TRS Group provides our customers is to speed up the process by which they can utilize and monetize their dormant assets, whether these assets are contaminated properties or untapped oil reserves".

Mr. Dodson added that, "the new name and logo provides an umbrella under which emerging corporate divisions, joint ventures, and global partnerships can thrive as a cohesive family and brand."

For information about TRS Group, please contact Tracy Barton, Marketing Director, at 503-635-3316 or by email at tbarton@thermalrs.com. To learn more about the ERH technology please visit our web site www.thermalrs.com.

About TRS Group, Inc.

TRS Group, Inc. is a carbon neutral company whose core technology - Electrical Resistance Heating (ERH) – is being delivered to the environmental remediation market and the emerging thermally enhanced oil recovery market. Since its launch in 2000 TRS has been the market leader and the premier provider of ERH services in North America for *in situ* soil and groundwater remediation.

The ERH technology applies electrical current below the surface via electrodes that are installed to the required depth of treatment or product recovery. As electrical current flows between these electrodes, the resistance creates heat. Targeted contaminants and water become vapors and steam that are recovered and treated at the surface. Viscous petroleum products are heated until liquefied and extracted for conversion to oil and fuel.

TRS Group is in the process of expanding its environmental remediation operations by forming international partnerships and joint ventures worldwide.
